

API Specification Documentation
Version 2.24

(B2B Digital Integration)

Change Log

Version	Date	Author	Description
2.2	17 Mar 2022	Subob Hadi	Slight update on the access token generation and client id + secret
2.3	17 Mar 2022	Birin	Update flow on how to get client id/secret and add technical specification for digital signature
2.4	23 May 2022	Azdim Zul Fahmi	Update Error Code Mapping to Action
2.5	3 June 2022	Azdim Zul Fahmi	Add unmap error code action
2.6	6 June 2022	Subob Hadi	Add PLN Prepaid and Postpaid Request Response example
2.7	21 June 2022	Subob Hadi	Add new Error Code
2.8	1 July 2022	Birin	Update new flow to get Client ID and Client Secret
2.9	29 July 2022	Birin	Minor update for credential and dev console access
2.10	3 Aug 2022	Fauzan Hibatur	Add Frequently Asked Questions
2.11	19 Aug 2022	Subob Hadi	Adding Idempotency notes in the callback section
2.12	16 Sep 2022	Azdim Zul Fahmi	Update PBB product implementation
2.13	20 Sep 2022	Subob Hadi	Update detailed PBB product request and response fields
2.14	15 Nov 2022	Hana Maulinda	Update admin fee for Pulsa Postpaid, add Samsat response
2.15	1 Dec 2022	Birin & Hana	Update request & response example for Pulsa, PLN, and Deals
2.16	8 Dec 2022	Birin & Hana	Update request & response example for Voucher Game, Streaming, Belajar, ITK, Gas PGN
2.17	12 Dec 2022	Birin & Hana	Update request & response example for BPJS, Samsat, PDAM, Angsuran Kredit, Biaya Pendidikan, PBB
2.18	4 Jan 2023	Ghazi, Birin & Hana	Update API explanation on security & web service details, Update request & response example for PDAM
2.19	10 Jan 2023	Subob Hadi & Hana	Add unified PBB API response version and Premi Asuransi
2.20	23 Feb 2023	Birin & Hana	Update Token Generation Flow. Add MCCM endpoint, Add request and response example for Property, Update request and response example for PDAM.
2.21	9 Mar 2023	Birin & Hana	Update How to get Access Token, Update Callback default request body example, Update PDAM unify response
2.22	24 Mar 2023	Subob Hadi	Add Samsat Unified Response & Info
2.23	11 May 2023	Birin & Hana	Add request & response example for Donasi
2.24	22 May 2023	Birin & Hana	Add new section for MPN (Modul Penerimaan Negara), update error code list and add request and response example for Voucher Game (Non Google Play - Direct Top Up)

1 Introduction

This document is intended to be used as guidelines to implement GoTo Bills and Top-up integration for partners.

2 Web Service Security

The following document contains a brief explanation about Web Services that will be used by the application to manage data transactions among backend and client-end.

See this table to see the header requirements of each process request:

Process	Content-Type	Authorization	Accept	Signature
Request token		✓		
Inquiry	✓	✓	✓	
Checkout	✓	✓	✓	✓
Get Order Detail	✓	✓	✓	
Get Order List	✓	✓	✓	
Get Product List	✓	✓	✓	
Get Deposit Balance	✓	✓	✓	

2.1 Headers Details

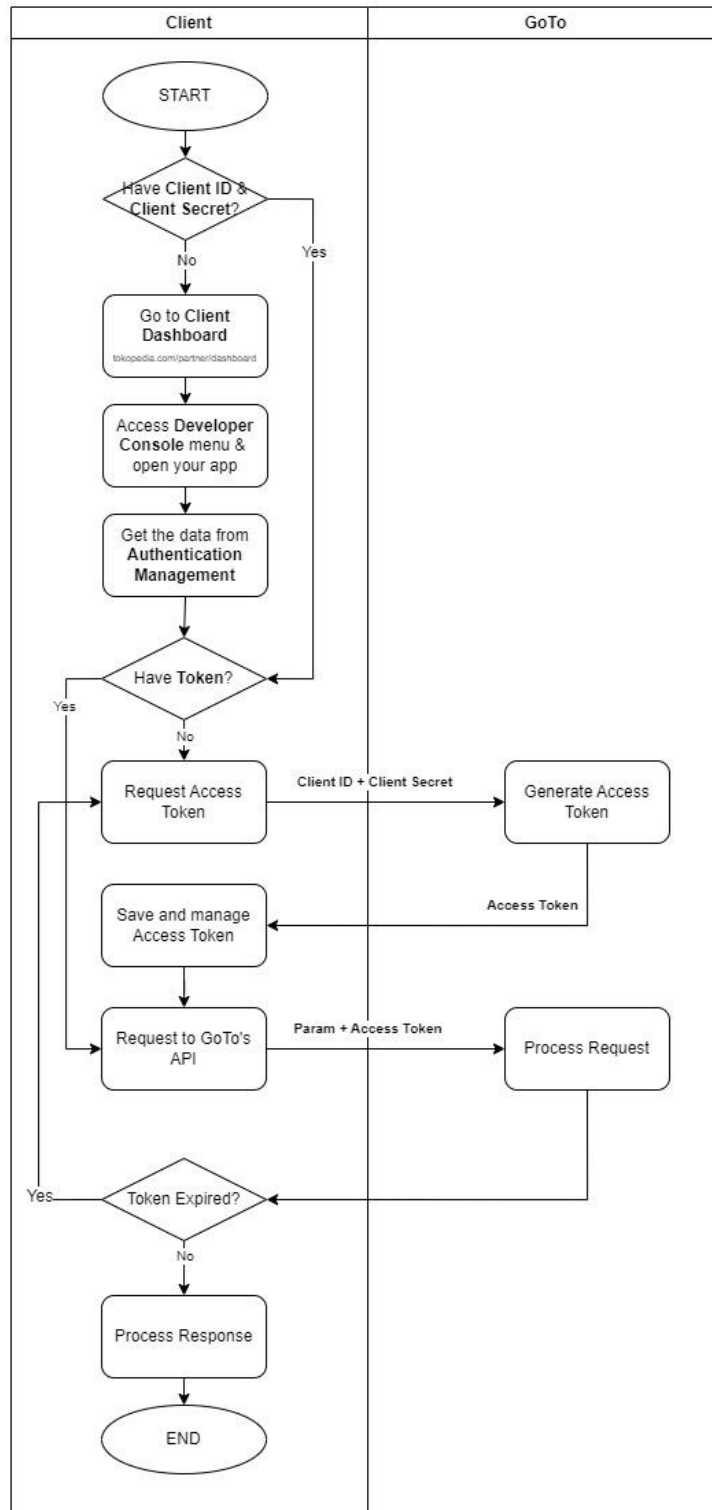

Parameter	Value	Description
Content-Type	application/json	
Authorization	Bearer token	See section 2.3 to get the token
Accept	application/json	
Signature	Digital signature with PSS or PKCS mode	Mandatory for checkout request. See section 2.4 for detail

2.2 Domain Details

Environment	Value
Sandbox	https://b2b-playground.tokopedia.com/api
Production	https://b2b.tokopedia.com/api

2.3 Token Generation

Flow:

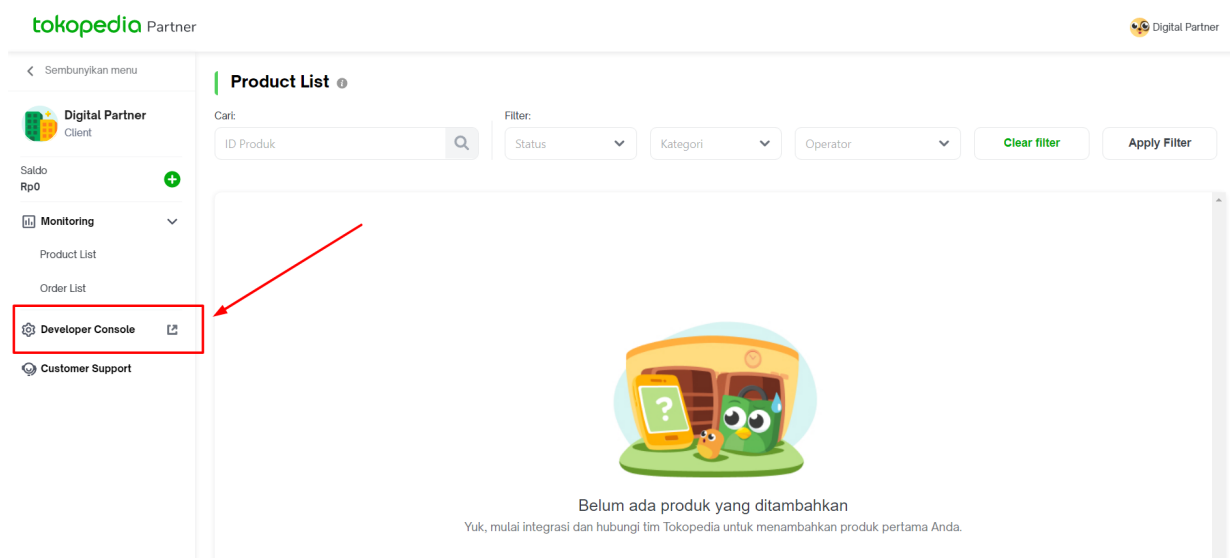

- **ClientID** and **Client Secret**: this will act as your **username** and **password**. **Please keep this confidential as this will identify your company's identity.**
- **Access Token**: this will be required for **every request** you made to GoTo's API for transaction purposes
- This flow works only for **API Version 2**

Steps:

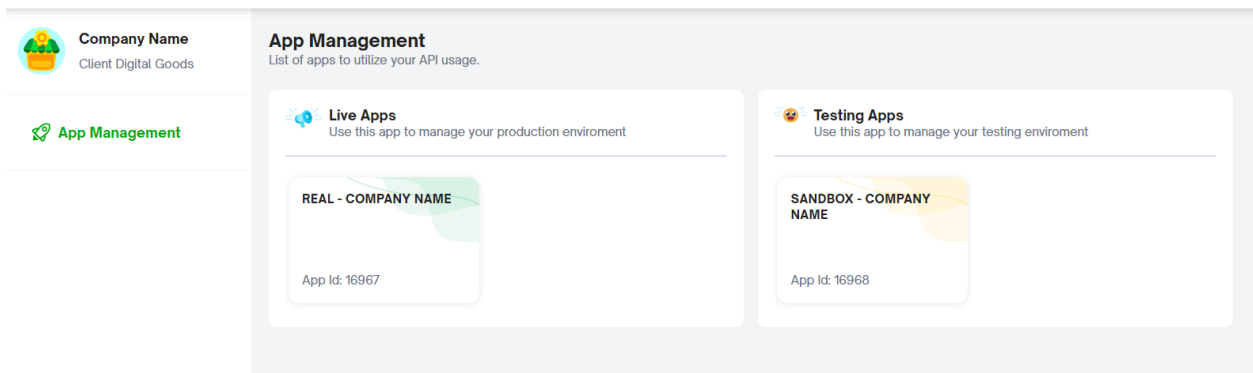

1. Get **client_id** and **client_secret**
2. Get **access token**
3. Request to GoTo's API with the **access token**

2.3.1 How to get ClientID and Client Secret?

Ensure that you already have your company credential. If you don't have it, please register your company through [Tokopedia Digital Solution](#). Then, ask the GoTo representative to approve your submission. Once approved, you can access **Developer Console** via the client dashboard menu.

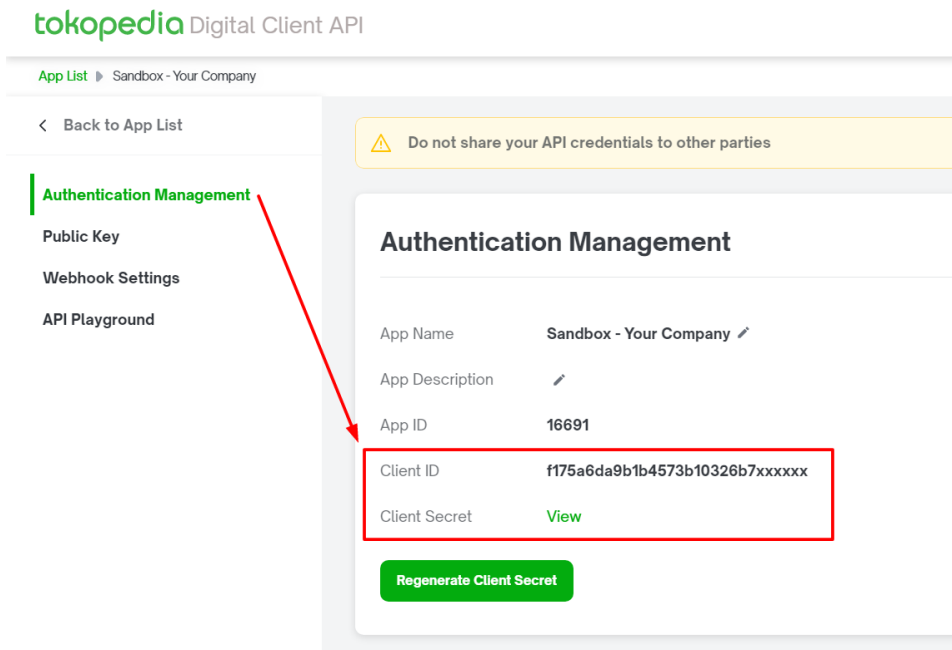

After being redirected to the developer console, you can see 2 apps generated on that page. Please access and manage it for development purposes.

- Live App (Real/Production)** Manage your production environment so you can connect to our production API endpoint <https://b2b.tokopedia.com/api>.
- Testing App (Sandbox)** Manage your testing environment so you can connect to our testing API endpoint <https://b2b-playground.tokopedia.com/api>.

*If you don't see these 2 apps on your dev console, please inform our team for support.

Then, choose the application suitable to your testing purpose whether for testing in Sandbox (Playground) or Production. Please go to “**Authentication Management**” at the top left menu. You will see the **client_id** and **client_secret** that you can use for the integration.

You can regenerate the **client secret** if needed.

Please continue to manage and complete your environment setting on both testing and production app.

2.3.2 How to get Access Token?

Requirements:

- Client ID
- Client Secret
- Whitelisted IP of your production server to hit our production server

Steps:

1. Encode your client id and client secret to **base64** with format: **client_id:client_secret**.

For sandbox, please use the client id and secret from **Testing App**. While for production (live) please use the client id and secret from **Live App**

2. Make a POST request to https://accounts.tokopedia.com/token?grant_type=client_credentials and use the base64 encoded credentials string from step 1. Put it on the request header. The same endpoint is used both in the sandbox and production environment.

Example:

```
curl -X POST
'https://accounts.tokopedia.com/token?grant_type=client_credentials'
-H 'Authorization: Basic Y2xpZW50X2lkOmNsaWVudF9zZWNYZXQK'
-H 'Content-Length: 0'
-H 'User-Agent: PostmanRuntime/7.17.1'
```

3. If successful, you will get the response like below:

```
{
  "access_token": "LSPr7x7sRGaewzwZE6IcuA",
  "expires_in": 2592000,
  "token_type": "Bearer"
}
```

4. You can use the **access token** to make a request to GoTo's API like the following example:

```
curl -X GET
'https://b2b.tokopedia.com/api/v2/sample/endpoint'
-H 'Authorization: Bearer LSPr7x7sRGaewzwZE6IcuA'
```

for detail, you can read the documentation here:

<https://developer.tokopedia.com/openapi/guide/guides/authentication>

2.4 Digital Signature

GoTo uses Digital Signature for **financial transaction requests** to ensure the communication between both parties are not altered or tampered and prove the authenticity of the request. This way will increase our security to prevent fraud and loss.

Why do we use digital signatures?

Digital signature ensures the integrity of data or information. It can detect any change of the data or information by verifying the data or information with its signature.

When do we use digital signatures?

Every incoming or outgoing request between two parties that contain financial transactions or financial information must contain a digital signature. And the content and its signature must be validated before processing the request.

2.4.1 Technical Specifications

- Algorithm: **RSA**
- Key Size: **2048 bit**
- Mode: **PSS** or **PKCS**
- RequestBody should be canonicalized according to the following rules:
 - All new line “\n” should be stripped

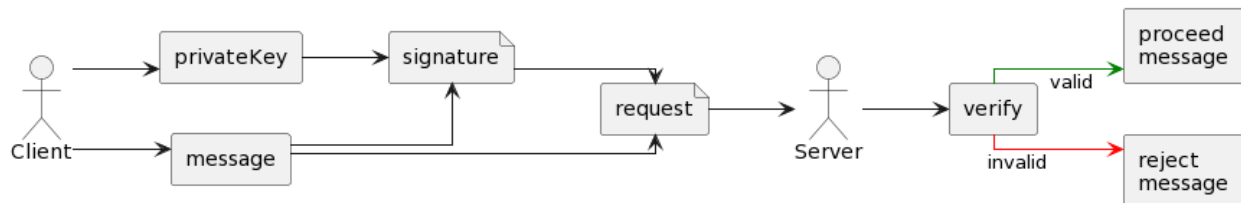

Request JSON body example:

```
{
  "client_number": "123456",
  "product_code": "5k-x1"
}
```

Request JSON body after canonicalization has been performed:

```
{"client_number": "123456","product_code": "5k-x1"}
```

RSA are using Pair of Key Public and Private Key. Private key will be used to sign the message and create the signature. While a public key will be used to verify the signature. If the message was tampered, the signature will be invalid so the server should reject the request.

2.4.2 Private key and Public key

Digital Signature will use a Pair of Private Key and Public Key. To generate it we can use OpenSSL (<https://www.openssl.org/>).

Private key:

Generate 2048 Bit RSA key:

```
openssl genrsa -des3 -out private.pem 2048
```

Export the RSA private key:

```
openssl rsa -in private.pem -out private_unencrypted.pem -outform PEM
```

After exporting the Private Key, please make sure the **private_unencrypted.pem**'s content starts with
-----BEGIN RSA PRIVATE KEY-----

Example:

```
-----BEGIN RSA PRIVATE KEY-----
MIIEowIBAAKCAQEAlBfXCXYvloc4aWB/2XJNn5z0mEZH3mfsyhMwV74DUQZJ0F4z

o1do+zNU8GkaTO9FGyAKQI5guAeaFF4KpIOh88zFT0E991ZeAz0I
```

```
-----END RSA PRIVATE KEY-----
```

Public key:

Export the RSA Public Key:

```
openssl rsa -in private.pem -outform PEM -pubout -out public.pem
```

After exporting the Public Key, please make sure the **public.pem** content starts with:

```
-----BEGIN PUBLIC KEY-----
```

Example:

```
-----BEGIN PUBLIC KEY-----
MIIBIjANBgkqhkiG9w0BAQEFAAOCAQ8AMIIBCgKCAQEAlBfXCXYvloc4aWB/2XJN
n5z0mEZH3mfsyhMwV74DUQZJ0F4zNFDDRGhtr3MGvIeg9yi7+facR0W0ZoIpfEsG
qZh2KMgWA99qz5wAjD03LLuUHxQNjVK0YuwFbP488+YHExpBxt2UdAwUyfZUWP8w
f1lAZPYki1dchVqVyYV36yUf8pgJ4leOZQZiZ/12QEj97HWuRJRRQ9orZt/Wgd14
zb2GCHHSulSw51qDAUHsQs115YDOsyMuEJBT4tvoHQ8nLjQ0Y4tUjjDx1vxHJoxB
hcjjRcVKPcxdsVxNxbWdXofNO2/sHKWMQBC/6t7KrJ6GoXSgokZLEARuTvVGdu6s
lQIDAQAB
-----END PUBLIC KEY-----
```

- Delete **private.pem** permanently

After you have generated the **public key**, please put the information on your **developer console** (Public Key Section) both on testing app and live app, so that system can verify your signature.

You must differentiate the public key for testing and production purposes.

DO NOT use the above example for testing or live apps!

2.4.3 How to generate Digital Signature at the checkout request

These are the steps you need to follow to generate signatures during the checkout process. This is done to ensure that if any bot, machine, or person attempts to modify the request, we will be alerted.

Additionally, if the request changes during transmission, it will be rejected. To create your signature, you can use this link (<https://github.com/tokopedia/cryptography-example>) as a guide.

The step to generate signature are:

1. First you need the **private key** and **public key**. See section [2.4.2](#) for detail. And please make sure you share the public key into Tokpedia's dev console.

2. Then you need to include/import a **private key** to your code.

Example in golang:

```
func ParseRsaPrivateKeyFromPemStr(privPEM string) (*rsa.PrivateKey, error) {
    block, _ := pem.Decode([]byte(privPEM))
    if block == nil {
        return nil, errors.New("failed to parse PEM block containing the key")
    }
}
```

```

priv, err := x509.ParsePKCS1PrivateKey(block.Bytes)
if err != nil {
    return nil, err
}

return priv, nil
}

```

3. Sign the request payload with **PSS** or **PKCS** mode (depending on your config in **developer console**). with the **private key** with the function provided by your cryptography library. Note: please make sure the payload that you sign is the payload that is already serialized and will be on your request body.

Example in golang:

```

func SignPSS(privKey *rsa.PrivateKey, msg string) string {
    rng := rand.Reader
    message := []byte(msg)
    hashed := sha256.Sum256(message)

    signature, err := rsa.SignPSS(rng, privKey, crypto.SHA256, hashed[:], nil)
    if err != nil {
        fmt.Fprintf(os.Stderr, "Error from signing: %s\n", err)
        return ""
    }

    sEnc := base64.StdEncoding.EncodeToString(signature)
    return sEnc
}

```

Example in Java:

```

public static String Sign(PrivateKey privateKey, String msg) {
    try {
        Signature signature = Signature.getInstance("SHA256withRSA",
"BC");
        signature.initSign(privateKey);

        byte[] message = msg.getBytes();
        signature.update(message);

        byte[] sigBytes = signature.sign();

        byte[] sig64 = Base64.getEncoder().encode(sigBytes);
        return new String(sig64);
    } catch (Exception ex) {
        System.out.println(ex.toString());
    }
    return "";
}

```

Example in PHP:

```

<?php
require __DIR__ . '/vendor/autoload.php';

use phpseclib3\Crypt\RSA;
$privKey = file_get_contents('./key/priv.pem');

```

```

$pubKey = file_get_contents('./key/pub.pem');
$priv = RSA::loadPrivateKey($privKey); // private key

$plaintext = 'test';
$signature = $priv->sign($plaintext);
$base64sign = base64_encode($signature);

echo $base64sign;

$pub = RSA::loadPublicKey($pubKey);
$verify = $pub->verify($plaintext, $signature);

echo "\n";
echo $verify ? 'verified' : 'unverified';
?>

```

Example in Python:

```

from Crypto.Signature import pss
from Crypto.Hash import SHA256
from Crypto.PublicKey import RSA
from Crypto import Random
import base64

message = 'To be signed'
key = RSA.import_key(open('signature/priv.pem').read())
h = SHA256.new(message.encode('utf-8'))
data = pss.new(key).sign(h)
# print(signature)
encodedBytes = base64.b64encode(data)
encodedStr = str(encodedBytes, "utf-8")

print(encodedStr)

```

4. Attach the signature at the checkout request header. (endpoint: /v2/order)

Example:

```

curl -X POST
'https://b2b-playground.tokopedia.com/api/v2/order'
-H 'Authorization: Bearer c:Y2xpZW50X2lkOmNsaWVudF9zZWNYZXQK'
-H 'Signature:
PTke/eqvaulh5Saw16SJTCXKs0Cjw2WuKvz8T10/k4BcxfaZAqgyFDS5vgb0GR9X4AAv2t6onnQOaG
HnzwyHUHHMpAlDFi8TUmykxkSBfZTmAxAhcUfu9tqo8LcJjDRHg4frdNTwAzDiS8m35t7Lt/eimuPb
os6yQNDRBWuNzbMU4wkOI9ziIwjFvNBJD+xutcRjaqtr8XxCpAQtii+Nq1vd3B+ubbMZp4MmaZiU5t
MWtpRusOqRNs3THL0qQtGC1cv4rrCEyv140K3vIbutnkTsusaSN+851XmJSUPyRTDSBZBKo9sIEj7u
PqEWhlSGuvWMznAjhzNEE/xGmVHnqg=='
-H 'Content-Type: application/json'
-H 'Accept: application/json'

```

2.4.4 Verify GoTo Signature from Callback

To verify the message that we sent, you need our public key. Please ask our TechOps to how to get our public key.

And to verify the message the steps are:

1. Include / parse our **PublicKey**.

Example in Golang:

```
func ParseRsaPublicKeyFromPemStr(pubPEM string) (*rsa.PublicKey, error) {
    block, _ := pem.Decode([]byte(pubPEM))
    if block == nil {
        return nil, errors.New("failed to parse PEM block")
    }

    pub, err := x509.ParsePKIXPublicKey(block.Bytes)
    if err != nil {
        return nil, err
    }

    switch pub := pub.(type) {
    case *rsa.PublicKey:
        return pub, nil
    default:
        break // fall through
    }
    return nil, errors.New("Key type is not RSA")
}
```

2. Get the request body. (Make sure you get our request body before you deserialize it).

3. Get the signature from our request header.

4. Verify the message using the signature.

Example in Golang using PSS mode:

```
func VerifyPSS(pubKey *rsa.PublicKey, msg string, base64Signature string) bool {
    message := []byte(msg)
    bSignature, err := base64.StdEncoding.DecodeString(base64Signature)

    if err != nil {
        fmt.Println("Failed to decode signature")
        return false
    }
    hashed := sha256.Sum256(message)

    errVer := rsa.VerifyPSS(pubKey, crypto.SHA256, hashed[:], bSignature, nil)
    if errVer != nil {
        fmt.Fprintf(os.Stderr, "Error from verification %s\n", errVer)
    }
}
```

```
        return false
    }
    return true
}
```

3 Transaction Flow

The diagram below describes the transaction flow of GoTo digital product.

Referring to the flow, the inquiry API is only used for inquiry product that have a specific bill amount.

For non-inquiry products such as Pulsa and Paket data, It isn't required to call the inquiry API. We can use checkout API requests directly.

For request token(step 1), you only need to request access token if:

1. You don't have the access token
2. Your token was expired

*If you already have the access token, you can use the same token as long as the token is not expired

3.1 Timeout Period

In the case of a communication failure between a client application and GoTo, client should query the transaction using Order Detail API to check the transaction status before retrying to create the same request.

4 Web Services Details

4.1 Product

Product will be used to get the list of products that you are eligible for (currently active).

4.1.1 Product List

There are 2 cases for the Product List API with details as follow:

4.1.1.1 Get all active products

This API will return all the products that are active and eligible for the partner.

Field	Value
Endpoint	/v2/product-list/
HTTP Method	GET
Response	<pre>{ "data": [{ "type": "product", "id": "t25k", "attributes": { "is_inquiry": false, "price": 369, "product_name": "telkonsel 25k" "status": 1, } }] }</pre>

Product List Response Description

Property	Data Format	Description
type	String	
id	String	Product code for product
attributes	Object	Object Wrapper for response data
is_inquiry	Boolean	Mark if the product needs to do inquiry or not
product_name	String	The name of the product
price	int	The price that Tokopedia sold to the client. The value will be based on business arrangement
status	int	Status of the product 1 = Active 2 = Inactive (if the product is toggled off intentionally due to a specific use case. E.g: No longer opened from the operator) 3 = Temporarily Inactive (if the product is temporarily on issue from the operator / supplier)

4.1.1.2 Get specific product information

This API will check whether the product code is opened for the partner. This capability uses the product code as the filter.

Field	Value
Endpoint	/v2/product-list?product_code=<<product_codes>> E.g: /v2/product-list?product_code=15k-xl,kode-voucher-google-100k
HTTP Method	GET

Response (product found)	<pre>{ "data": [{ "type": "product", "id": "t25k", "attributes": { "is_inquiry": false, "price": 369, "product_name": "telkomsel 25k" "status": 1 } }] }</pre>
Response (product not found)	<pre>{ "data": [] }</pre>

Product List with Filter Response Description

Property	Data Format	Description
type	String	
id	String	Product code for product
attributes	Object	Object Wrapper for response data
is_inquiry	Boolean	Mark if the product needs to do inquiry or not
product_name	String	The name of the product
price	int	The price that Tokopedia sold to the client. The value will be based on business arrangement

status	int	Status of the product 1 = Active 2 = Inactive (if the product is toggled off intentionally due to a specific use case. E.g: No longer opened from the operator) 3 = Temporarily Inactive (if the product is temporarily on issue from the operator / supplier)
--------	-----	---

4.1.2 Deals Product Detail

This endpoint specifically to fetch additional information needed for Deals (Food & Voucher) product like description, expiry date, tnc, outlets, etc.

Field	Value
Endpoint	/v2/product-list/deals
HTTP Method	GET
Response	<pre>{ "data": [{ "type": "product-deals", "id": "haagen-dazs-500", "attributes": { "desc_long": "Cara memesan Haagen Dazs dengan menggunakan E-voucher:\n~Customer WA ke nomor +62 819-9365-6789 atau klik link https://linktr.ee/HaagenDazs untuk memesan product yg diinginkan.\n~Pesanan akan dikirim dengan sistem Cash On Delivery (COD)\n~Tunjukkan voucher pada staff HD yg mengirim, untuk dilakukan redeem voucher.\n", "desc_short": "Haagen-Dazs yang merupakan super premium ice cream dari Amerika Serikat", </pre>

--	------------------

Deals Product Detail - response field description

Property	Data Format	Description
type	String	
id	String	Product code for product
attributes	Object	Object Wrapper for response data
desc_long	String	Long Description version of the product
desc_short	String	Short Description version of the product (not all products will have short description version)
image_large	String	Image URL with bigger size
image_small	String	Image URL with smaller size
end_date	String	Product availability end date (dd MMM YYYY)
outlets	Array of Object	List of outlets data
name	String	Outlets name
district	String	Outlets location address
coordinate	String	Google Maps coordinate for the outlets location
tnc	String	Terms and Condition of the product

4.2 Inquiry

Inquiry will be used only for checking user bills for specific products such as PDAM, PLN, etc. Products that need to use the Inquiry API are defined in the response of Product List API on the **is_inquiry** field.

Field	Value
Endpoint	/v2/inquiry
HTTP Method	POST
Request Payload	<pre>{ "data": { "type": "inquiry", "attributes": { "product_code": "pln-postpaid", "client_number": "2121212", "fields": [{ "name": "optional", "value": "optional" }] } } }</pre>

Response
Payload

```
{
  "data": {
    "type": "inquiry",
    "id": "2121212",
    "attributes": {
      "admin_fee": 2500,
      "base_price": 10000,
      "client_name": "User Default",
      "client_number": "2121212",
      "fields": null,
      "inquiry_result": [
        {
          "name": "ID Pelanggan",
          "value": "2121212"
        },
        {
          "name": "Nama",
          "value": "User Default"
        },
        {
          "name": "Total Bayar",
          "value": "Rp 12.500"
        },
        {
          "name": "IDPEL",
          "value": "2121212"
        },
        {
          "name": "NAMA",

        "name": "RP TAG PLN",
        "value": "Rp 10.000"
    },
    {
        "name": "ADMIN BANK",
        "value": "Rp 2.500"
    },
    {
        "name": "TOTAL BAYAR",
        "value": "Rp 12.500"
    }
],
"meter_id": "2121212",
"product_code": "pln-postpaid",
"sales_price": 12500
}
}
```

4.1.1 Inquiry Request Field Description

Parameter	Data Format	Description	Required
product_code	String		Mandatory
client_number	String		Mandatory
fields	Array	Fields will contains extra parameter for specific product who need bills amount checking before transaction	Optional

4.1.2 Inquiry Response Field Description

Property	Data Format	Description
type	String	
attributes	Object	Object Wrapper for response data
product_code	String	Product Identifier
client_number	String	Number inputted by the end-user
fields	Array	Fields contain extra parameters for specific products. Fields are part of the client_number parameter for some products that need more than 1 client number parameter to pay the bill.
sales_price	Number	Bill amount that the user needs to pay. Sales_price includes the admin fee.
inquiry_result	Array	Inquiry results contain bill information for specific products that need to display extra information. <i>Note:</i> <i>Every product has different inquiry result</i>

admin_fee	Number	amount that charge to user as transaction fee
base_price	Number	Price before adding the admin fee (sales price - admin fee)
client_name	String	Customer name in bill payment product
client_number	String	Customer number in bill payment product
meter_id	String	Id meter in PLN Postpaid product

4.3 Checkout

Checkout will be used for creating new orders, every partner's checkout request needs to generate **request_id** as identifier and. **A signature header is required**

The **request_id** is an identifier that **uniquely** identifies the transaction and will be used globally as an identifier for that specific transaction.

*** Please note that GoTo does not responsible for duplicate transactions request generated by client.**

Field	Value
Endpoint	/v2/order
HTTP Method	POST
Request Payload	<pre>{ "data": { "type": "order", "id": "12345" "attributes": { "product_code": "pln-postpaid", "client_number": "2121212", "amount": 12500, "fields": [{ "name": "optional", "value": "optional" }] } } }</pre>

Response Payload	<pre> { "data": { "type": "order", "id": "12345", "attributes": { "client_number": "2121212", "error_code" : "", "error_detail" : "" "fields": [{ "name": "optional", "value": "optional" }], "fulfilled_at": null, "partner_fee": 500, "product_code": "pln-postpaid", "sales_price": 12500, "status": "Pending", } } } </pre>
------------------	---

4.3.1 Checkout Request Field Description

Parameter	Data Format	Description	Required
type	String	API type. Fill with "order" in order API	Mandatory
id	String	Unique for order request, generated by the client. Max 50 characters (alphanumeric)	Mandatory

product_code	String	Code that determine the product	Mandatory
client_number	String	Number inputted by the end-user	Mandatory
amount	Number	Order amount	Non-inquiry: optional Inquiry: Mandatory
fields	Array	Fields contain extra parameters for specific products.	Optional

4.3.2 Checkout Response Field Description

Property	Data Format	Description
type	String	API type. For order API, it will be filled with "order"
id	String	Unique for order request, generated by the client. Max 50 character (alphanumeric)
attributes	Object	Object Wrapper for response data
client_number	String	Number inputted by the end-user
error_code	String	Code that represents the error state
error_detail	String	Error description
fields	Array	Fields contain extra parameters for specific products. Fields are part of the client_number parameter for some products that need more than 1 client number parameter to pay the bill.
fulfilled_at	Datetime	Time when the order changed to final status with format RFC3339 Value will be filled if the status is successful.
partner_fee	Number	Amount of fee that will be received by partner

product_code	String	Product Identifier
sales_price	Number	Amount that user needs to pay. Sales_price includes admin fee.
status	String	Current state of order request please refer to Order Status Reference

4.4 Order Details

Order Details purpose is to get the current status for a specific order using **request_id** as an identifier.

Note: we are generating signature at the order detail response header. You can utilize this if you want to

Case 1: Order with **Success** status (Generate Payment Receipt)

Field	Value
Endpoint	/v2/order/<<request_id>>
HTTP Method	GET
Response	<pre>{ "data": { "type": "order", "id": "1211492", "attributes": { "admin_fee": 500, "client_name": "USER", "client_number": "2121212", "error_code": "", "error_detail": "", "fields": [{ "name": "nama", "value": "nilai" }], "fulfilled_at": "2020-06-03T09:01:36Z", "fulfillment_result": [{ "name": "No. Meter/Idpel", "value": "2121212" }, { "name": "Nama", "value": "USER" }] } } }</pre>

```
    },  
    {  
      "name": "Tarif/Daya",  
      "value": "R1/000001300VA"  
    },  
    {  
      "name": "BL/TH",  
      "value": "JAN20"  
    },  
    {  
      "name": "Stand Meter",  
      "value": "01011100-00022222"  
    },  
    {  
      "name": "Rp Tag Tagihan",  
      "value": "Rp. 10.000"  
    },  
    {  
      "name": "No Ref",  
      "value": "01012011"  
    },  
    {  
      "name": "Total Tagihan",  
      "value": "Rp 10.000"  
    },  
    {  
      "name": "Biaya Admin",  
      "value": "Rp 2.500"  
    },  
    {  
      "name": "Total Bayar",  
      "value": "Rp 12.500"  
    }  
  ],  
  "partner_fee": 100,  
  "product_code": "pln-postpaid",
```

	<pre> "sales_price": 12500, "serial_number": "01012011", "status": "Success", "voucher_code": "" } } } </pre>
--	---

To generate payment receipt, partner needs to use data from the fulfillment result array. Each product has a different format payment receipt. Please refer to **Bukti Bayar Template** document that will be provided separate by GoTo Team.

Case 2: Order with **Pending** status

Field	Value
Endpoint	/v2/order/<<request_id>>
HTTP Method	GET
Response	<pre> { "data": { "type": "order", "id": "1211492", "attributes": { "client_number": "2121212", "error_code": "", "error_detail": "", "fulfilled_at": null, "fulfillment_result": [], "partner_fee": 0, "product_code": "pln-postpaid", "sales_price": 12500, "status": "Pending", } } } </pre>

	<pre> } } </pre>
--	------------------

Case 3: Order with **Failed** status

Field	Value
Endpoint	/v2/order/<<request_id>>
HTTP Method	GET
Response	<pre> { "data": { "type": "order", "id": "1211492", "attributes": { "client_number": "2121212", "error_code" : "U00", "error_detail" : "User Fault", "fulfilled_at": null, "fulfillment_result": [], "partner_fee": 0, "product_code": "pln-postpaid", "sales_price": 12500, "status": "Failed" } } } </pre>

Error_code and error_detail will only be filled for **Failed** transaction. Error code and error detail will inform the failed reason of a transaction. The description of error_code and error_detail is described in section 4.8 .

4.3.1 Response Description

Property	Data Format	Description
type	String	
id	String	Identifier for order request, generated by user
attributes	Object	Object Wrapper for response data
client_number	String	Number inputted by end user
fields	Array	Fields will contains extra parameter for specific product who need bills amount checking before transaction
fulfilled_at	Datetime	Time when order changed to final status with format RFC3339 Value will be filled if the status is success.
partner_fee	Number	Amount of fee that will be received by partner
product_code	String	Product Identifier
sales_price	Number	Bill amount that user needs to pay. Sales_price includes admin fee.
status	String	Current state of order request please refer to Order Status Reference
error_code	String	Code that represents the error state
error_message	String	Error description
fulfillment_result	Array	Bill success information that can be used to generate the user receipt (proof as success transaction)
admin_fee	Number	amount that charge to user as transaction fee
client_name	String	Customer name in bill payment product
client_number	String	Customer number in bill payment product
meter_id	String	Id meter in PLN Postpaid product

4.5 Order List

Order list will contains order history data

Field	Value
Endpoint	/v2/order?page=xx&limit=yy
HTTP Method	GET
Response	<pre>{ "data": [{ "type": "order", "id": "6969", "attributes": { "client_number": "08780000000", "error_code" : "", "error_detail" : "" "fulfilled_at": null, "partner_fee": 0, "product_code": "FFID5", "sales_price": 5000, "status": "Pending" } }], "meta": { "current_page": 1, "limit": 1, "total_pages": 136 } }</pre>

4.5.1 Order List Response Description

Property	Data Format	Description
type	String	
id	String	Identifier for order request, generated by user
attributes	Object	Object Wrapper for response data
client_number	String	Number inputted by end user
error_code	String	Code that represents the error state
error_message	String	Error description
fields	Array	Fields contain extra parameters for specific products. Fields are part of client_number parameters for some products that need more than 1 client number parameter to pay the bill.
fulfilled_at	Datetime	Time when order changed to final status with format RFC3339 Value will be filled if the status is success.
partner_fee	Number	Amount of fee that will be received by partner
product_code	String	Product Identifier
sales_price	Number	Bill amount that user needs to pay. Sales_price includes admin fee.
status	String	Current state of order request please refer to Order Status Reference

4.6 Account Balance

Account will be used for get current saldo can be used for transaction

Field	Value
Endpoint	/v2/account
HTTP Method	GET
Response	<pre>{ "data": { "type": "account", "id": "5510064", "attributes": { "saldo": 1000012999 } } }</pre>

4.6.1 Account Balance Response Description

Property	Data Format	Description
type	String	
attributes	Object	Object Wrapper for response data
saldo	Number	Current Balance can be used for transaction

4.7 Order Status

All order status is defined by system, The below ones are used in this API.

Order Status	Description
Pending	Order accepted and waiting to progress
Success	Order has been completed
Failed	Order has been failed

4.8 Error Response

If there is something wrong within the process, we generalize error response with this format

Field	Value
Http Code	500 or 400
Response	<pre>{ "errors": [{ "code": "U00", "status": "400", "detail": "Please top up your account balance first", }] }</pre>

4.8.1 Response Description

Property	Data Format	Description
code	String	Error Message code Identifier (4.8.2)
status	String	Http Status
detail	String	Error message details

4.8.2 Error Code List

Error code will be shown on the order detail API response for failed transaction status.

Http Code	Error Code	Description	Error Case possibilities
500	S00	Internal Server Error	Internal Tokopedia system error
500	S01	Inquiry Pending. Please try again later	Inquiry is still on process due to delay from the biller
500	S02	Product is not available	Product is deactivated intentionally in Internal Tokopedia system
500	S03	Custom error message from Aggregator	Unmapped error from the biller / supplier
500	S04	Product is temporarily unavailable	Product is temporarily on issue from the supplier as Tokopedia detected high failure rate for the product
500	S05	Biller error. Please try again later	Biller is on issue.
500	S06	Auto failed by system due to biller or operator is not responding	More than 1 x 24 hour pending, will do auto failed by Tokopedia system
500	S07	Internal Server Error. Please re-tap the card	EMoney Update balance error due to Tokopedia or biller error
500	S08	General Card Error	EMoney Update balance general error (usually due to error that is unidentified)
500	S09	Out of stock. Please try again later. We will try to find you another source	
400	P01	Invalid Request Payload	Your request payload structure to Tokopedia is invalid
400	P02	Transaction is not found	When hitting order detail, the request_id is not found

400	P03	Duplicate Request ID, please check your system	You have requested a same request_id previously
400	P04	Product not found, please check your product code	The product code requested to Tokopedia system is wrong / does not exist
400	P05	Product price mismatch, please follow agreed price	The amount from Inquiry and checkout is different
400	P06	Insufficient balance, please top-up first or contact GoTo Business representative	For deposit type partners. As Gojek is using settlement, this error code will not be shown unless it is Tokopedia's fault
400	P07	Request ID cannot be null/empty and not allowed a white spaces or symbols	Invalid request_id , may contain invalid character like whitespace, symbol, or null
400	P08	Invalid or Expired Token	<ul style="list-style-type: none"> - Your token has expired. You need to re-request/refresh the token - You don't attach token to the request header - Your token format is invalid
400	P09	Interval limit reached	This is applied to some products. Which has limitations of the order rule. E.g: You cannot buy Pulsa 10k-simpat with the same number and same product within 5 minutes
400	P10	Invalid signature	Your digital signature at the request header is invalid
400	P11	Product is not inquiry	You do inquiry process for non-inquiry product
400	P12	Invalid Downline ID	
400	P13	Invalid status. Allowed status are 1 or 0	For BPJS KS, if the status thrown is not 1 or 0
400	P14	Some fields are missing. Please check your request	The required fields are incomplete
400	P15	Invalid fields value. Please check your request	For BPJS KS, if the fields value is invalid
400	P16	Invalid subscription day. Allowed value is between 1 - 28	For BPJS KS, if the subscription_day is not between 1 - 28
400	P19	Promo no longer available	For Promo feature, if the promo has been ended or not yet started due to Quota / Period rule
400	P21	Invalid card data Card Info Too Short. Please check your request	EMoney update balance - card data sent to Tokopedia is invalid. Check your system
400	P22	Invalid inquiry id. Please check your system	EMoney update balance - inquiry id sent to Tokopedia is invalid. Check your system

400	P23	Invalid card data: Invalid Hex. Please check your request	EMoney update balance - invalid hex sent to Tokopedia. Check your system
400	P24	Invalid card data: Required Field Empty. Please check your request	EMoney update balance - missing field sent to Tokopedia found. Check your system
400	P25	Invalid card data: Invalid Payload. Please check your request	EMoney update balance - payload sent to Tokopedia is invalid. Check your system
400	P26	Void not allowed	EMoney Void request - the selected product is not allowed to do void request
400	P27	Your request has reached limit, please try again later	
400	P28	User is ineligible to buy the product	Client number checkout with ineligible MCCM Products
400	U00	User Fault	General user error. E.g: Postpaid number but try to do prepaid top up, etc
400	U01	Bill already paid	User try to paid for a bill that already been paid before
400	U02	No Bill	Bill number not found
400	U03	Nomor yang Anda masukkan tidak valid	Invalid Phone Number, Phone Number expired, Phone number blocked by operator, etc.
400	U04	Unregistered user	BPJS KS if the user hasn't been registered yet for Autodebit
400	U05	Deactivated user. Please update the customer data	Deactivated user for BPJS KS autodebit
400	U06	User Fault. The user has already been registered	BPJS KS response if the user has already been registered for autodebit
400	U07	User Fault. Unsupported Card Issuer. Please check your card	EMoney update balance - the card used to update balance is not support / invalid
400	U08	User Fault. NFC does not supported. Please update on the ATM	EMoney update balance - the NFC does not supported. Advise user to update balance on the ATM
400	U09	Failed by Void request from User	EMoney Void request successfully voided. Hence the product status changed from success to failed
400	U10	Customer number is blocked by the biller / operator. Please advise customer to reach the operator	Customer number is blocked by the operator
400	U11	MSISDN Expired	Customer number is expired
400	U12	User has reached the maximum limit of transactions. Please try again later	Customer number reached maximum limit of transactions. E.g: kWh over Limit for PLN

			Prepaid, Data Package exceeding maximum policy, etc.
400	U13	Exceed maximum void duration policy	EMoney Void request has reached the maximum void max time policy

Based on the prefix on error codes, we can classify 3 kinds of error:

- Prefix S (SXX) is an error for server fault or biller fault in GoTo.
- Prefix P (PXX) is an error for partner fault. For this error, the partner needs to check the request sent to GoTo. There might be something wrong with the request.
- Prefix U (UXX) is an error for the end user (customer) fault.

Note:

Error code in this document is still subject to change. If there's additional error code or change in the code, GoTo representative will inform the part.

4.8.3 Error Code Action Map

Each error code need different action for each API, We have 4 action:

- **Retry** means the request is still in progress. Please try again every 10 seconds.
- **Pending**, get the latest status from **Order Detail** API.
- **Failed**, the request failed in the system.
- **Not Applicable** means the Error Code is not applicable in the API

Error Code	Inquiry	Checkout	Order Detail / Callback
S00	Retry	Pending	Retry
S01	Retry	Not Applicable	Not Applicable
S02	Failed	Failed	Failed
S03	Failed	Not Applicable	Failed
S04	Failed	Failed	Failed
S05	Failed	Not Applicable	Failed
S06	Not Applicable	Not Applicable	Failed
S07	Retry	Not Applicable	Not Applicable
S08	Retry	Not Applicable	Not Applicable
S09	Not Applicable	Not Applicable	Failed

P01	Failed	Failed	Not Applicable
P02	Not Applicable	Not Applicable	Failed
P03	Not Applicable	Failed	Not Applicable
P04	Failed	Failed	Not Applicable
P05	Not Applicable	Failed	Failed
P06	Not Applicable	Retry	Failed
P07	Not Applicable	Failed	Not Applicable
P08	Retry	Retry	Retry
P09	Not Applicable	Retry	Failed
P10	Not Applicable	Failed	Not Applicable
P11	Failed	Not Applicable	Not Applicable
P12	Not Applicable	Failed	Not Applicable
P13	Not Applicable	Not Applicable	Not Applicable
P14	Not Applicable	Not Applicable	Not Applicable
P15	Not Applicable	Not Applicable	Not Applicable
P16	Not Applicable	Not Applicable	Not Applicable
P19	Not Applicable	Failed	Failed
P21	Not Applicable	Not Applicable	Not Applicable
P22	Not Applicable	Not Applicable	Not Applicable
P23	Not Applicable	Not Applicable	Not Applicable
P24	Not Applicable	Not Applicable	Not Applicable
P25	Not Applicable	Not Applicable	Not Applicable
P26	Not Applicable	Not Applicable	Not Applicable
P27	Retry	Not Applicable	Retry
P28	Not Applicable	Retry with eligible promo product	Not Applicable

U00	Failed	Failed	Failed
U01	Failed	Failed	Failed
U02	Failed	Failed	Failed
U03	Failed	Failed	Failed
U04	Not Applicable	Not Applicable	Not Applicable
U05	Not Applicable	Not Applicable	Not Applicable
U06	Not Applicable	Not Applicable	Not Applicable
U07	Not Applicable	Not Applicable	Not Applicable
U08	Not Applicable	Not Applicable	Not Applicable
U09	Not Applicable	Not Applicable	Failed
U10	Failed	Failed	Failed
U11	Failed	Failed	Failed
U12	Failed	Failed	Failed
U13	Not Applicable	Not Applicable	Not Applicable
Unmap Error Code	Failed	Pending	Pending

4.9 Callback for Partner

For partners that need the callback mechanism from GoTo after the order has been processed, you can submit the URL through your Developer Console.

Callback requirements:

1. Your service should be using SSL (HTTPS)
2. Your service should whitelist our IP (**52.74.35.225/32**) to hit your service
3. Your service should allow method POST
4. Your service should allow Content-type **application/vnd.api+json**
5. Callback might arrive more than one time for the same order
6. Implementing the [check order status](#) is **mandatory** even though the callback mechanism has been implemented.

Please ensure your system handles the *idempotency* case of Tokopedia's callback. As there is a possibility of Tokopedia giving multiple callbacks for 1 same order.

We are generating a **signature** when doing a callback request to your API at the **request header** for security purposes. Client must validate the signature before processing the callback.

See point [2.4.4](#) for example to verify the signature from GoTo Callback

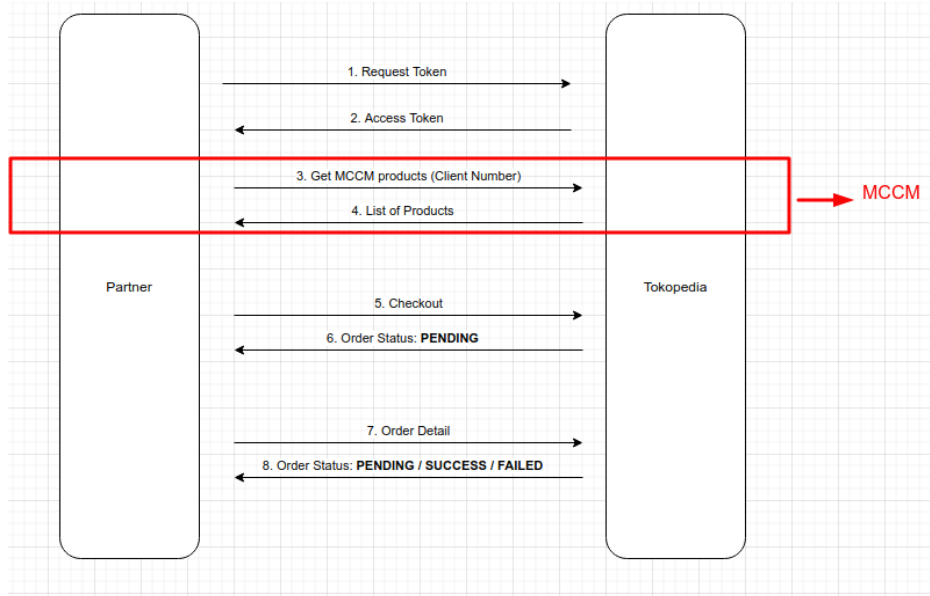

Callback default request body example:

```
{"data":{"type":"order","id":"1231231","attributes":{"admin_fee":0,"client_name":"User","client_number":"102111106111","error_code":"","error_detail":"","fields":null,"fulfilled_at":"2020-12-09T10:48:45Z","fulfillment_result":[],"partner_fee":0,"product_code":"pln-prepaid-token-100k","sales_price":102500,"serial_number":"5196 1584 0828 2085 4701","status":"Success","voucher_code":"5196 1584 0828 2085 4701"}}}
```

4.10 Other Endpoints

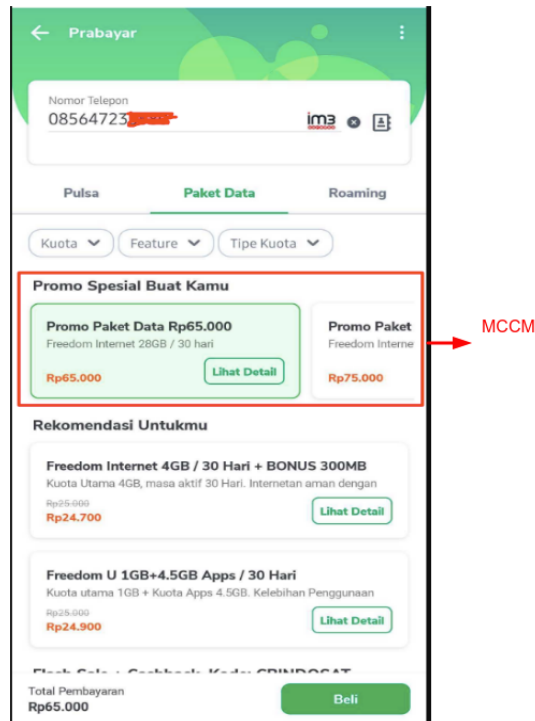

4.10.1 MCCM

Flow:

The flow of **Request Token(1-2)**, **Checkout - Order Detail (5 - 8)** will be the same as other regular products: [Request Token](#), [Checkout](#), [Order Detail](#), [Callback](#).

Example of MCCM features in Tokopedia Main Apps:

4.10.1.1 Get MCCM Products

Get MCCM Products is the endpoint to get special product offers for specific users based on **client number**

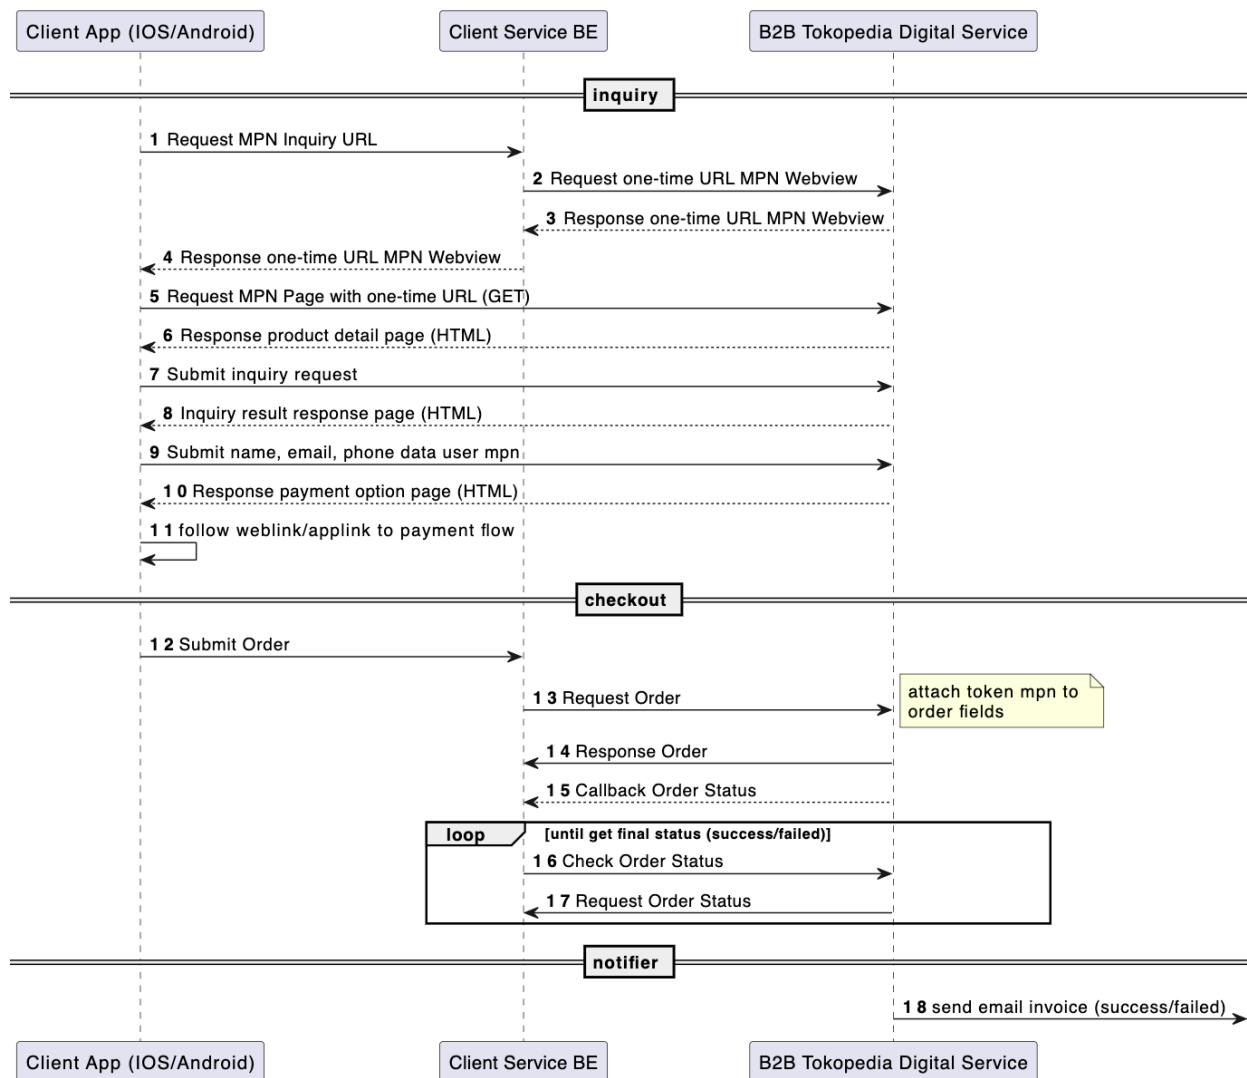

Field	Value
Endpoint	/v2/promotion-product?client_number=08781231231
HTTP Method	GET
Response Payload	<pre>{ "data": [{ "type": "product", "id": "mccm-xtra-combo-35gb+70gb-203200", "attributes": { "client_number": "08781231231", "is_inquiry": false, "price": 203200, "product_name": "XTRA Combo Double Youtube 35GB + 70GB, 30hr Rp 203.200" } }, { "type": "product", "id": "mccm-xtra-combo-5gb+10gb-1733200", "attributes": { "client_number": "08781231231", "is_inquiry": false, "price": 173200, "product_name": "XTRA Combo Double Youtube 5GB + 10GB, 30hr Rp 173.200" } }] }</pre>

4.10.1.2 Response Field Description

Property	Data Format	Description
data	Array of Object	Will return the list of MCCM products offered
type	String	API Type. Will always return "product"
id	String	Product Code that will be used to do checkout
attributes	Object	Object Wrapper for response data
client_number	String	Client number of the customer. E.g: For Telco, use phone number
is_inquiry	Boolean	<p>Flag the product needs to do re-inquiry or not. If false, then you can directly hit checkout endpoint If true, then you have to hit the inquiry endpoint first before checkout.</p> <p><i><u>As of now, all MCCM product doesn't have to do re-inquiry.</u></i> Hence, the value will always be false</p>
price	Integer	<p>Sales Price of the product to Gojek or Customer</p> <p><i>Note: The value interpretation could be different according to the business arrangement.</i></p>
product_name	String	Name of the product offered to the customer

4.10.2 MPN

MPN (Modul Penerimaan Negara) has a special transaction flow compared to other categories, especially for the inquiry process as you need to use the **WebView** page provided by Tokopedia. Then, continue the checkout process using your backend service via Tokopedia API. You are required to follow this government's rule to open the MPN service on your platform via Tokopedia. Below is the diagram for the process.

Inquiry Process:

1. Client mobile app will request the MPN Inquiry URL to the Client's Service (BE)
2. Client Service will [request one-time URL](#) MPN Webview to the B2B Tokopedia Digital Service
3. B2B Tokopedia Digital Service will respond you a one-time URL MPN Webview that is only valid for one-time use and expired in 900 seconds.

4. Client Service will forward the one-time URL MPN Webview to the client app as a response.
5. The client app will make a GET request for [Inquiry Page](#) to the B2B Tokopedia Digital Service using the response URL from the client service
6. B2B Tokopedia Digital Service will respond to the request with an HTML response containing the product detail page
7. The client app submits the inquiry request with **client_number** and **product_code** using the query param to the B2B Tokopedia Digital Service
8. B2B Tokopedia Digital Service will respond to the [Inquiry Result Page](#) (HTML).
9. On this page, user need to input required field via webview; Name, Email, and Phone number
10. Client app (user) clicks on the “Choose Payment Method” button to proceed on the payment option page, then select one of the provided payment options
11. To continue to payment process client app must catch the weblink/applink that send by Tokopedia triggered when user click on the “Pay Bills” button.

Checkout Process:

12. The client app will submit an order on Webview to the client service
 13. The client service will make a request order to the B2B Tokopedia Digital Service, client need to send the **Token** that already included on the weblink/applink sent by Tokopedia
 14. B2B Tokopedia Digital Service will respond order detail to the client service
 15. B2B Tokopedia Digital Service will make a callback to the client service containing the order status
 16. The client service will check the status to the B2B Tokopedia Digital Service for order status
 17. B2B Tokopedia Digital Service will respond to the client service with the order status
- Steps 16 and 17 will be repeated until the final order status (success/failed)
18. Notify invoice via email user when order success / failed

4.10.2.1 Request one-time URL

Field	Value
Endpoint	api/v2/otu
HTTP Method	POST
Request Payload	<pre>{ "id": 0, "type": "token", "attributes": { "product_code": "xxx",</pre>

	<pre> "client_payment_link": "https://dummy.com/payment-link?number=client_number&total=amount" } } </pre>
Response Payload	<pre> { "id": 1, "type": "token", "attributes": { "url": "https://b2b-staging.tokopedia.com/api/v2/proxy/pdp/mpn?token=xxx&lang=id", "expired_in": 300 } } </pre>

4.10.2.1.1 Request Field Description

Property	Data Format	Description
type	String	API Type should be "token" for this case
id	Integer	id that will be used to the next request
attributes	Object	Object Wrapper for request data
product_code	String	Product Code that will be used to do checkout
client_payment_link	String	<p>Will be used to compose the payment link for the checkout process in your app. You also can fill this link with parameter that you need for your application. The variable number and total can be customized based on your own variable.</p> <p>Example: "https://dummy.com/payment-link?number=client_number&total=amount"</p> <p>Final result you will get for your checkout page:</p>

		"https://dummy.com/payment-link?number=12354533 &total=100000"
--	--	--

4.10.2.1.2 Response Field Description

Property	Data Format	Description
attributes	Object	Object Wrapper for response data
type	String	API Type. Will always return "token"
id	Integer	id that will be used to the next request
url	String	Url with a token for access to the MPN page valid for one-time use. URL always responds to parameter lang with default value ID , If you want to use another language you should update the value with the language that you want before rendering the Webview (The value should be ID or EN)
expired_in	Integer	Validity token in seconds

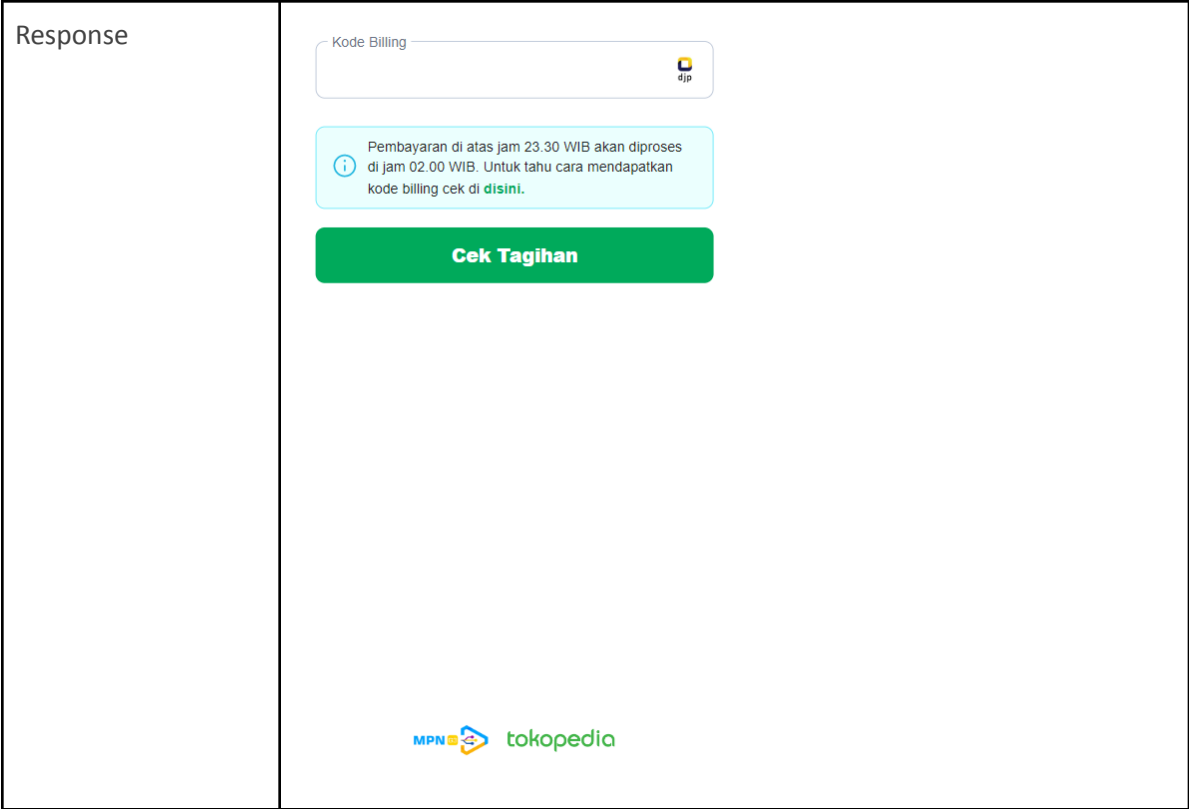

4.10.2.1.3 Sandbox Dummy Request & Response

Request	Response	Description
<pre>{ "data": { "type": "token", "attributes": { "product_code": "mpn-pnbp", "client_payment_link": "https://dummy.com/payment-link? number=client_number&total=amo unt"</pre>	<pre>{ "data": { "type": "token", "attributes": { "expired_in": 900, "url": "https://b2b-sandbox.tokopedia.com/api /v2/proxy/pdp/mpn?token=125d0fac-f8f 7-4005-a727-35aa3e388c2e&lang=id"</pre>	Success case.

<pre>} } }</pre>	<pre>} } }</pre>	
<pre>{ "data": { "type": "token", "attributes": { "product_code": "mpn-byr-pnbp", "client_payment_link": "https://dummy.com/payment-link? number=client_number&total=amo unt" } } }</pre>	<pre>{ "errors": [{ "detail": "Product not found", "status": "400", "code": "P04" }] }</pre>	Failed case, Product not found.

4.10.2.2 Inquiry Page

Field	Value
Endpoint	/api/v2/proxy/pdp/mpn?token=123e4567-e89b-12d3-a456-426614174000&lang=id
HTTP Method	GET
Query Param	token=123e4567-e89b-12d3-a456-426614174000 lang=id

4.10.2.2.1 Request Field Description

Full URL comes from a one-time URL response.

Property	Data Format	Description
token	String	Token for accessing the webview
lang	String	Language for content (ID/EN)

4.10.2.2.2 Response Description

Property	Data Format	Description
client_number	String	The field to input client number (billing id) of the customer
Bayar Button	Submit	Will access inquiry link with token and lang base on response of request one-time URL

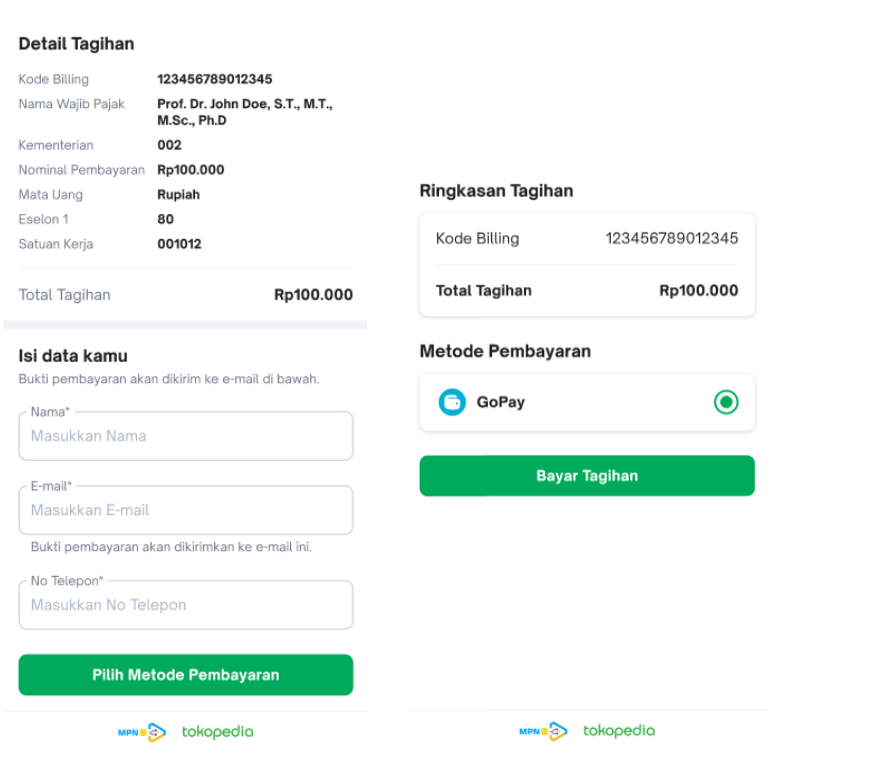

4.10.2.2.3 Sandbox Dummy Request & Response

Request	Response	Description

4.10.2.3 Inquiry Result Page

Field	Value
Endpoint	/api/v2/proxy/inquiry/mpn?client_number=xxx&token=123e4567-e89b-12d3-a456-426614174000&lang=id
HTTP Method	GET
Query Param	<pre>token=123e4567-e89b-12d3-a456-426614174000 client_number=xxx lang=id</pre>
Response	 <p>The screenshot displays the MPN inquiry result page. It includes a 'Detail Tagihan' section with fields for Kode Billing (123456789012345), Nama Wajib Pajak (Prof. Dr. John Doe, S.T., M.T., M.Sc., Ph.D.), Kementerian (002), Nominal Pembayaran (Rp100.000), Mata Uang (Rupiah), Eselon 1 (80), and Satuan Kerja (001012). A 'Ringkasan Tagihan' section shows the same total amount. Below this is the 'Isi data kamu' section with input fields for Nama, E-mail, and No Telepon, and a 'Pilih Metode Pembayaran' button. The 'Metode Pembayaran' section shows the GoPay option selected and a 'Bayar Tagihan' button. The MPN and tokopedia logos are visible at the bottom.</p>
Submit	<pre>{{client_payment_link}}?number=client_number&total=amount</pre> <p>Example: “https://dummy.com/payment-link?number=client_number&total=amount”</p> <p>Final result you will get for your checkout page: “https://dummy.com/payment-link?number=820210615444111&total=7306464”</p>

4.10.2.3.1 Request Field Description

Full URL comes from the Inquiry response.

Property	Data Format	Description
token	String	Token will have expired time
client_number	String	Client number of the customer

4.10.2.3.2 Response Field Description

Property	Data Format	Description
Inquiry response		Inquiry response data based on customer billing id
Customer Data		Fields that must be filled in by the user for sending invoices, include Name, Email, and Phone Number
Pilih Metode Pembayaran		Will redirect users to payment method option page
Payment Page - Bayar Tagihan	Submit	Will access payment link containing client_number and amount . Client number and the amount will be filled automatically on submit base on inquiry result. The value will validated in Tokopedia side, ensure you include the MPN token on your checkout process.

4.10.2.3.3 Sandbox Dummy Request & Response

Request	Response	Description
<p>Detail Tagihan</p> <p>Kode Billing 123456789012345 Nama Wajib Pajak Prof. Dr. John Doe, S.T., M.T., M.Sc., Ph.D Kementerian 002 Nominal Pembayaran Rp100.000 Mata Uang Rupiah Eselon 1 80 Satuan Kerja 001012</p> <hr/> <p>Total Tagihan Rp100.000</p> <hr/> <p>Isi data kamu Bukti pembayaran akan dikirim ke e-mail di bawah.</p> <p>Nama* <input type="text" value="Masukkan Nama"/></p> <p>E-mail* <input type="text" value="Masukkan E-mail"/></p> <p>Bukti pembayaran akan dikirimkan ke e-mail ini.</p> <p>No Telepon* <input type="text" value="Masukkan No Telepon"/></p> <p>Pilih Metode Pembayaran</p> <hr/> <p> </p> <hr/> <p>Ringkasan Tagihan</p> <p>Kode Billing 123456789012345</p> <p>Total Tagihan Rp100.000</p> <p>Metode Pembayaran</p> <p> GoPay </p> <p>Bayar Tagihan</p> <hr/> <p> </p>	<p>YOUR_PAYMENT_PAGE</p>	<p>Success case</p>

5 Request Response Example

Every product has a different inquiry result and fulfillment result. This section, we provide the response and request sample for the product. For the request, you can refer to [section 4.2](#) for inquiry and [section 4.3](#) for checkout and use the specific product code.

5.1 Telco - Prepaid (Pulsa, Paket Data, Roaming all operator)

Product code : 50k-simpat

Checkout	Order Details
<p>Request payload:</p> <pre>{ "data": { "type": "order", "id": "testorder123", "attributes": { "product_code": "50k-simpat", "client_number": "081211311111" } } }</pre>	<p>Request URL:</p> <pre>GET https://{{base_url}}/v2/order/testorder123</pre>
<p>Response payload:</p> <pre>{ "data": { "type": "order", "id": "testorder123", "attributes": { "client_number": "081211311111", "error_code": "", "error_detail": "", "fields": null, "fulfilled_at": null, "partner_fee": 0, "product_code": "50k-simpat", "sales_price": 52000, "serial_number": "", "status": "Pending" } } }</pre>	<p>Response payload:</p> <pre>{ "data": { "type": "order", "id": "testorder123", "attributes": { "admin_fee": 0, "client_name": "", "client_number": "081211311111", "error_code": "", "error_detail": "", "fields": null, "fulfilled_at": "2022-12-01T03:26:39Z", "fulfillment_result": [{ "name": "Nomor", "value": "081211311111" }, { "name": "Serial Number", "value": "TLKM0305956071" }, { "name": "Harga", "value": "Rp 52.000" }], "partner_fee": 0, "product_code": "50k-simpat", } } }</pre>

	<pre> "sales_price": 52000, "serial_number": "TLKM0305956071", "status": "Success", "voucher_code": "" } } } </pre>
--	---

5.2 Telco - Postpaid (Pulsa)

Product code example: `pasca-telkomsel`

Inquiry	Checkout	Order Details
<p>Request payload:</p> <pre> { "data": { "type": "inquiry", "attributes": { "product_code": "pasca-telkomsel", "client_number": "081222308111" } } } </pre>	<p>Request payload:</p> <pre> { "data": { "type": "order", "id": "testorder124", "attributes": { "product_code": "pasca-telkomsel", "client_number": "081222308111", "amount": 102000 } } } </pre>	<p>Request URL:</p> <pre> GET https://{{base_url}}/v2/order/testorde r124 </pre>
<p>Response payload:</p> <pre> { "data": { "type": "inquiry", "id": "081222308111", "attributes": { "admin_fee": 2000, "base_price": 100000, "client_name": "Toko***** Us**", "client_number": "081222308111", "fields": null, "inquiry_result": [{ "name": "Nomor Telepon", "value": "081222308111" }, { "name": "Nama", "value": "Toko***** Us**" }, { "name": "Total Bayar", "value": "Rp 102.000" }, { "name": "Total Tagihan", "value": "Rp 100.000" }] } } } </pre>	<p>Response payload:</p> <pre> { "data": { "type": "order", "id": "testorder124", "attributes": { "client_number": "081222308111", "error_code": "", "error_detail": "", "fields": null, "fulfilled_at": null, "partner_fee": 0, "product_code": "pasca-telkomsel", "sales_price": 102000, "serial_number": "", "status": "Pending" } } } </pre>	<p>Response payload:</p> <pre> { "data": { "type": "order", "id": "testorder124", "attributes": { "admin_fee": 2000, "client_name": "Tokopedia User", "client_number": "081222308111", "error_code": "", "error_detail": "", "fields": null, "fulfilled_at": "2022-12-01T03:39:41Z", "fulfillment_result": [{ "name": "Nomor Telepon", "value": "081222308111" }, { "name": "Nama", "value": "Tokopedia User" }, { "name": "Total Tagihan", "value": "Rp 100.000" }] } } } </pre>

<pre>{ "name": "Biaya Admin", "value": "Rp2.000" }], "meter_id": "", "product_code": "pasca-telkomsel", "sales_price": 102000 } }</pre>		<pre>"name": "Biaya Admin", "value": "Rp2.000" }, { "name": "Total Bayar", "value": "Rp 102.000" }], "partner_fee": 0, "product_code": "pasca-telkomsel", "sales_price": 102000, "serial_number": "", "status": "Success", "voucher_code": "" } } }</pre>
--	--	--

5.3 Listrik PLN

5.3.1 PLN Prepaid

Product code example: `pln-prepaid-token-20k`

Inquiry	Checkout	Order Detail
<p>Request payload:</p> <pre>{ "data": { "type": "inquiry", "attributes": { "product_code": "pln-prepaid-token-20k", "client_number": "102111106113" } } }</pre>	<p>Request payload:</p> <pre>{ "data": { "type": "order", "id": "testorder126", "attributes": { "product_code": "pln-prepaid-token-20k", "client_number": "102111106113", "amount": 22750 } } }</pre>	<p>Request URL:</p> <pre>GET https://{{base_url}}/v2/order/testorde r126</pre>

Notes: some of the fields might be empty string due to limitation of data source from suppliers. We recommend you to hide the field shown to end user's if the value is an empty string to avoid confusion of end users.

Only in SAMSAT JATIM, end users will get SMS from SAMSAT JATIM after payment is successful.

SAMSAT Info

Reference: <https://www.tokopedia.com/pajak/samsat>

Help Page reference: <https://www.tokopedia.com/help/article/syarat-dan-ketentuan-esamsat>

SAMSAT SULSEL

1. Silahkan download aplikasi E-Samsat Sulsel di smartphone anda.
2. Pilih area kepemilikan kendaraan bermotor dan isi data: Nomor Polisi, Nomor Rangka, Nomor Ponsel, dan Email.
3. Dapatkan kode bayar dan masukkan kode bayar pada kolom di atas.
4. Kode bayar hanya berlaku 1x24 jam pada hari yang sama . Request kembali kode bayar melalui aplikasi E-Samsat Sulsel jika sudah tidak bisa digunakan (expired)
5. Kode bayar juga bisa diperoleh melalui SMS (Telkomsel dan Indosat) Ketik: ESAMSAT (spasi) NORANGKA (spasi) NIK (spasi) EMAIL kirim ke 99250.
6. Atau gunakan akun Telegram Bapenda Sulsel. Add bot @BapendaSulselbot dan ikuti petunjuknya.
7. Pengesahan dan cetak SKPD dapat dilakukan hingga 30 hari sejak pembayaran pajak di Kantor Bersama atau gerai layanan SAMSAT Provinsi Sulawesi Selatan.

SAMSAT SULUT

1. Dapatkan kode bayar melalui aplikasi e-samsat Sulut
2. Silahkan masukan kode bayar
3. Setelah melakukan pembayaran, lakukan pengesahan STNK di SAMSAT terdekat di Provinsi Sulawesi Utara.

SAMSAT SUMUT

1. Silahkan download aplikasi SAMSAT Mobile SUMUT di smartphone anda.
2. Pilih "Kode Bayar".
3. Pilih simbol "+" pada pojok kanan bawah layar.
4. Masukan nomor polisi, 5 digit terakhir nomor rangka, nomor mesin, serta NIK.
5. Masukan email dan nomor handphone yang nantinya akan dipakai untuk mengirim kode OTP.
6. Jika sudah diisi semua, pilih "Submit".
7. Masukan kode OTP yang dikirim pada email dan/atau sms.
8. Akan muncul menu berisikan kode bayar dan rincian tagihan dan objek pajak.
9. Masukkan kode bayar pada kolom diatas untuk melakukan pembayaran
10. Kode bayar akan secara otomatis kadaluarsa pukul 23:00 WIB setiap harinya. Pastikan kode bayar anda aktif sebelum melakukan pembayaran.

SAMSAT KALTARA

1. Lakukan pembayaran dengan cara pilih Wilayah Samsat Kaltara kemudian input 6 digit Kode Kota/Kab + 12 digit Kode Bayar pada kolom diatas.
2. Kode Bayar dapat diperoleh melalui SMS dengan cara ketik: ESAMSAT No Polisi, contoh: ESAMSAT KU 1234 AB, kirim ke 0811-538-1234.
3. Informasi Kode Kota/Kabupaten: 076513 (Tarakan), 076514 (Bulungan), 076516 (Nunukan), 076517 (Malinau).

SAMSAT BANTEN

- 1.Kode pembayaran hanya diperoleh melalui aplikasi SAMSAT Banten Hebat (SAMBAT)
- 2.Saat ini Tokopedia belum menerima kode bayar dari aplikasi SIGNAL.
- 3.Cek kembali laman SAMSAT Tokopedia secara berkala untuk mendapatkan info tentang cara mengunduh aplikasi SAMBAT.

SAMSAT JABAR

- 1.Dapatkan kode bayar di aplikasi SAMBARA
2. Kirim SMS dengan format esamsat[spasi]no rangka[spasi]NIK
Kirim ke 0811-211-9211.
3. Setelah bertransaksi buka kembali aplikasi SAMBARA dan klik icon "Bukti Bayar" untuk mengunduh e-SKKP.
4. Per tanggal 18 Desember 2022, kode bayar juga bisa didapatkan dari aplikasi "Sapawarga"

SAMSAT JATENG

1. Untuk mendapatkan Kode Bayar, silahkan download aplikasi SAKPOLE. Jangan lupa update aplikasi New Sakpole di perangkat anda.
Masukkan Data Kepemilikan dan Kendaraan Bermotor (KBM) di New Sakpole: Nomor Polisi, NIK, dan Nomor Rangka (5 digit terakhir).
2. Pilih Metode Pembayaran Tokopedia.
3. Bayar Pajak Kendaraan di Tokopedia. Masukkan kode bayar pada kolom diatas.
- 4.Kode Bayar hanya berlaku selama 2 (dua) jam sejak diperoleh.
5. Setelah melakukan pembayaran, masuk lagi ke akun New Sakpole anda untuk mendapatkan E-TBPKP dan E-Pengesahan

SAMSAT JATIM

1. Silahkan masukan Nomor Kendaraan
2. Setelah melakukan pembayaran, anda akan mendapatkan SMS dari SAMSAT ke nomor handphone {Company Name} yang terdaftar
3. Buka SMS tersebut, lalu klik link pada SMS untuk download E-TBPKP terbaru anda
4. Selamat! Anda sudah mendapatkan E-TBPKP yang sah, anda dapat melakukan pengesahan di Kantor Bersama SAMSAT atau layanan unggulan terdekat

SAMSAT KALTIM

1. Silahkan masukan Nomor Kendaraan
2. Tukarkan bukti pembayaran pada saat pencetakan SKPD dan pengesahan STNK di Kantor Bersama SAMSAT terdekat di Provinsi Kalimantan Timur.

SAMSAT Kep. RIAU

1. Silahkan masukan Kode Bayar
2. Tukarkan bukti pembayaran pada saat pencetakan SKPD dan pengesahan STNK pada layanan Samsat yang tersebar di Kepulauan Riau.
